

**SPECIFIC ANTAGONISTS FOR GLUCOSE-DEPENDENT  
INSULINOTROPIC POLYPEPTIDE (GIP)**

5

**Abstract**

In one embodiment, this invention provides an antagonist of glucose-dependent  
insulinotropic polypeptide (GIP) consisting essentially of a 24 amino acid polypeptide  
10 corresponding to positions 7-30 of the sequence of GIP. In another embodiment, this invention  
provides a method of treating non-insulin dependent diabetes mellitus in a patient comprising  
administering to the patient an antagonist of glucose-dependent insulinotropic polypeptide (GIP).  
In yet another embodiment, this invention provides a method of improving glucose tolerance in  
a mammal comprising administering to the mammal an antagonist of glucose-dependent  
insulinotropic polypeptide (GIP).
